Title: Perfect score: US-09-030-061-5 26 1 STLSC 5

Scoring table: ELCSUM62

Serrisal bisition state contin

Database : A_Geneseq_34:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The sequence of its flagments may be used to inhibit fractions expression, thus controlling inflammatory and haemostatic groupsess in e.g. Theumatoid arthritis, ischaemic injury. Sequence 6% AA:
                                                                                                                                                                                                                                                                                                               DNA and protein sequence(s) for novel adenosine receptor, A3 - all recombinant vector contg the DNA, DNA probe(s), and cell culture transformed with the vector. Claim is figure 1, 29pp; English.
A3 adenosine receptors produced from cloned genes may be used to extrem compounds for A3 adenosine receptor activity, or for determining the amount of adenosine agonist or antagonist drug in solution. The DNA or its fragments may also be used as probes to determine tissue distribution of the receptors, to detect the placement of also gene or in EFEF to detect genetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                N-PSDB;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            PI Protein that induces yamma interferon product in immuno.competent PI cells - used e.g. as antiviral or antitumour agent, also induces PI cytotoxicity of killor cells.
PI cytotoxicity induces IFNgamma production in cytotoxicity of the invention. This protein is useful as an antiviral.
PI cytotoxicity of the protein cells and cytotoxicity and flately. Cytotoxylora actavinatum.
PI can be used for theating or preventing AIIS, original and cytotoxicity of the protein can also be used to induce IFNgamma production in cytotoxicity of cytotoxicity of the protein cells and when used with interlocking (IL-2) and tumour cytotoxicity of the protein (INF), may improve the effect of the cytotoxicity of the protein (INF), may improve the policy of the protein contains and production in production in protein which can then be putliced (it assayed)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ma. 03.0%

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This equation is the life light aparese. This equation is the reconstant protein which induces interferon-gamma protein for the component to disc. This protein may be used as the orifor regional in a drug for the prevention and treatment of each will near theorem. Since discusses, bacterial infections and computed discusses.

Claim 1: Rage 46; 60pp; English.

Claim 1: Rage 46; 160pp; English.

(IGIF-2) A: IGIF-2 variant (W3187); and an IGIF variant (W22049).

Which may be an alternate transcript, also exist Probes derived from the world, acid sequences can be used to public; the expression of IGIF-2 in conditions that are associated with inflammation or aberrant expression of IGIF-2, such as antibodies, antagons's or other that increat with IGIF-2, such as antibodies, antagons's or other than increat with IGIF-2, such as antibodies, antagons's or other than increat with IGIF-2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This protein sequence represents an interieron wamma inducing factor: (ICIF 2) wariant, identified from a liver cDNA library. This sequence differs from ICIF-2 identified from a Tlymphocyte cDNA library (W2204) in that amino acid 140 is found to be changed from Ard to lie. A second variant, W2204, the Arst Note Protein defined from Ard to lie. A second sequences can be used to quantify the expression of ICIF-2 in conditions that are associated with inflammation or aborrant expression of ICIF-2. The protein can be used to screen for compounds that inflam the protein can be used to screen for compounds that inflam (expectable) riberyres or actions a satisfactor of TCIF 2 expression of expectable protein can also be used to diagnose, prevent or treat BiF 2 induction of proliferation, differentiation or maturation of treat BiF 2 induction of proliferation, differentiation or maturation of the options.
                                                                                                                                                                                                                                                                                    with inflammation Claim 1: Page 46:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Interferon gamma inducing factor:2 (IGIF:2) protein.
Interferon gamma inducing factor:2, TGIF 2, leading to laphoryte;
inflammation; proliferation; differentiation; maturation; tissue damage.

Disclosure, Fage 22: 26pp; English.

The present sequence represents a novel protein from mouse liver cells, which induces interferon-gamma (IFN gamma) production in immunocompetent cells. This protein enhances cytotoxicity of killer cells and induces their formation. It is used as an antioncotic agent for antitumour immunotherapy, an antiviral (including anti-AIDS) or antibacterial agent, and in the represent of the line including anti-AIDS) or antibacterial agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   expression or beliefly. The protein can also be used to diagnose, prevent or treat IGIF-2 induction of proliferation, differentiation or maturation of Leuroytes or lymphocytes, especially in relation to tissue dumage associated with inflammation sequence. 193 AA:
                                                                                                                                                                                                                                                                                                                                                                                                                                                               and in the freatment of atopic or immune system diseases, e.g. asthma, hayferer or rheumatism. When formulated with interleukin-3, it is also sed to treat leab parents and tother parents and tother cancers. When used in antitumour immunotherapy of louksomia and other cancers. When used in antitumour immunotherapy this novel protein significantly improves the immunotherapy title feet of interleukin-2 (II-2), compared with use of II-2 alone, either when administered to the patient (before administration of the system of the modium in which calls (intended for return to the patient) are being grown sequence 157 AA:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          26 JAN 1998 (first entry)

Fix vaccines against 135 mediate builth allergy

Recording against 135 mediate builth.

Pr vaccines against 135 mediate builth.

Pr vaccines against 135 mediate builth the terminal cysteine residues) was

CC This peptide sessuence (Without the terminal cysteine residues) was

CC displayed by RSW17 mimeotope phages. The peptide was synthesised

CC with the additional cysteine residues for circularisation. The

Peptide was used in a new immunogenic molecule for raccination against

CC and treatment of allery. The immunogenic molecule comprises at least

CC and treatment of allery. The immunogenic molecule comprises at least

CC and treatment of allery. The monoclonal anti-human Ige

CC immunoglobulin E (IgE) recognised by the monoclonal anti-human IgE

CC antibody 85W17 and a molecy capable of eliciting an immune response

CC against the peptide. The peptide is used in the preparation of vaccines

CC against an IgE-mediated disease, especially allergy. The molecules can

Actualist : burns interloukin-l-gamma - used for treating seminologic disorders coused by burna Hill-gamma (IL-1-gamma). Series for the 45% of the problem interleukin-l-gamma (IL-1-gamma). The present sequence represents burnar interleukin-l-gamma (IL-1-gamma). The problem is present sequence by the following containing the sequence represents burnar interleum gamma. Human IL-1-gamma intersection camma is the sequence of the following containing the sequence of the following containing a sequence of the following containing a sequence of the following containing a sequence of the following containing and the sequence of the following containing a sequence of the following containing the sequence of the following containing the sequence of the following containing the following containing the following containing the following the following containing the following containing the following containing the following containing containing the following containing the following containing containing the following the following containing containing the following containing containing containing containing the following containing c
